

Your supply chain **under control**

Your global visibility, oversight and flow

Your Challenge

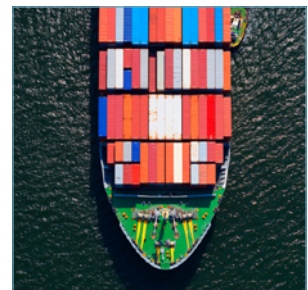

Today's markets are more competitive and demanding than ever.

In seeking competitive advantage businesses are looking further afield for all-new, lower-cost, better quality and faster lead-time products.

But as this reach extends around the globe, effectively managing the supply chain becomes more challenging and the risk of product damage, late-running orders and operational inefficiencies grows exponentially.

Questions about the status of an order, the total freight cost of a SKU,

vendor performance, milestone decisions and the reason behind a supply chain issue need accurate and rapid responses, or disruption and uncertainty will follow.

VISIBILITY

Regardless of physical distance, or supply chain complexity, our clients have visibility of activity and significant events, from vendor through to receipt

OVERSIGHT

Continuous data flow provides a high level view of production, vendor, inventory and carrier performance

FLOW

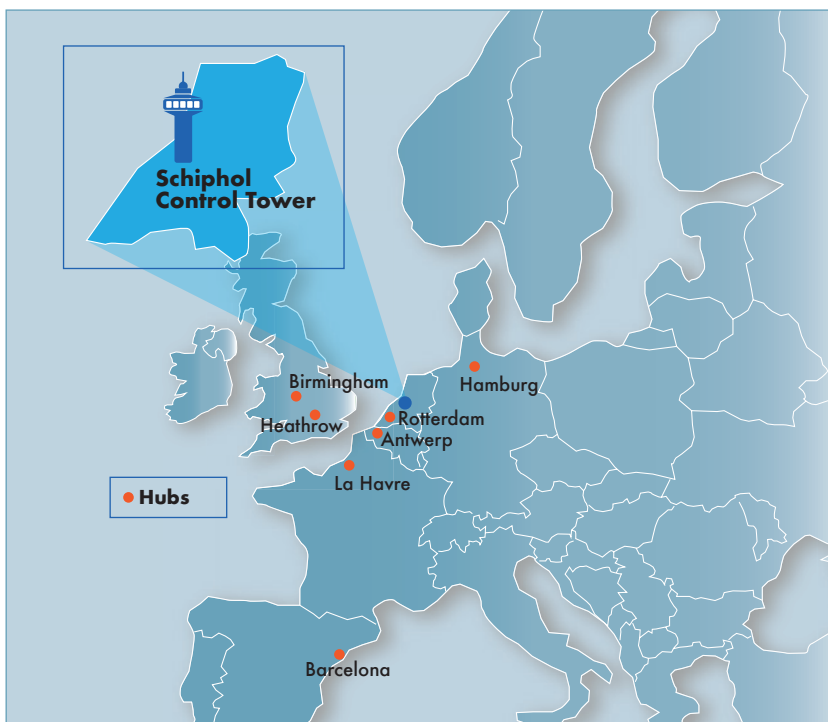

Flexing inventory, load consolidation and carrier options to make product consistently available at the most appropriate timing and quantity to match demand

Performance delivered **across Europe**

The Control Tower team gather and consolidate data from vendors, manufacturers and carriers to monitor and manage client supply chains, distributing updates in a consistent format.

We detect issues, risks and pitfalls at the earliest stage, which means that correcting action can be initiated and product flows maintained at optimum performance.

MIQ **CONTROLTOWER**

Managing pan-regional integrated supply chains end-to-end ensures that it consistently maintains the reliability and service levels that generate value over the long term and means that our clients can focus on their core business, confident that their supply chain will always deliver.

The heart of our control tower is the information hub that is supported and maintained by a dedicated team

in our Netherlands office, located strategically by Schiphol airport.

Status updates are collected continuously from suppliers, MIQ consolidation hubs and carriers to provide the Control Tower team with a clear picture on the actual status of purchase orders, product in stock and shipments that are in preparation or in transit.

CONTROLTOWER

Your supply chain **under control**

THE INTELLIGENT SUPPLY CHAIN

- **VENDOR MANAGEMENT**
Monitoring and expediting your purchase orders
- **CONSOLIDATION**
Regionally managed inventory and load management
- **TRANSPORT MANAGEMENT**
Optimised loads and multi-modal shipments
- **SUPPLY CHAIN VISIBILITY**
Order, stock, cost and performance updates

BENEFITS

- Enhanced client control with single point of contact
- Multi-lingual team maintain local language control
- Improvement in supply chain performance and visibility
- Managing inventory in the supply chain to maximise load and minimise stock levels
- Capability to respond to changes in demand and supply chain framework
